

JuraReport

Intelligent Report Generation Platform

An intelligent execution platform for oil & gas research work

Designed for oil & gas research and analysis scenarios, JuraReport standardizes, streamlines, and automates key research tasks, automatically generating stage outputs and ultimately assembling them into complete report deliverables.

🎯 Core Business Scenarios

Reserve Evaluation Report Auto-Generation

Standardize fixed research processes and nodes, automate data retrieval, analysis, and stage-output generation, and finally form a complete reserve evaluation report.

Production Performance Report Auto-Generation

Automatically retrieve production data, generate charts and tables, and complete trend, anomaly, and measure-effect analysis to produce standardized monthly production reports.

Conversational Report Auto-Generation (AI Agent)

Use natural-language interaction to rapidly generate required research reports, lowering the usage threshold and improving response efficiency.

💎 Product Value

Higher Efficiency

Automate repetitive processing tasks and significantly shorten research preparation time.

Unified Standards

Standardize research workflows, data definitions, and analytical logic for consistent outputs.

Trusted Data

Use authorized business data sources to ensure traceable, reliable results for professional research conclusions.

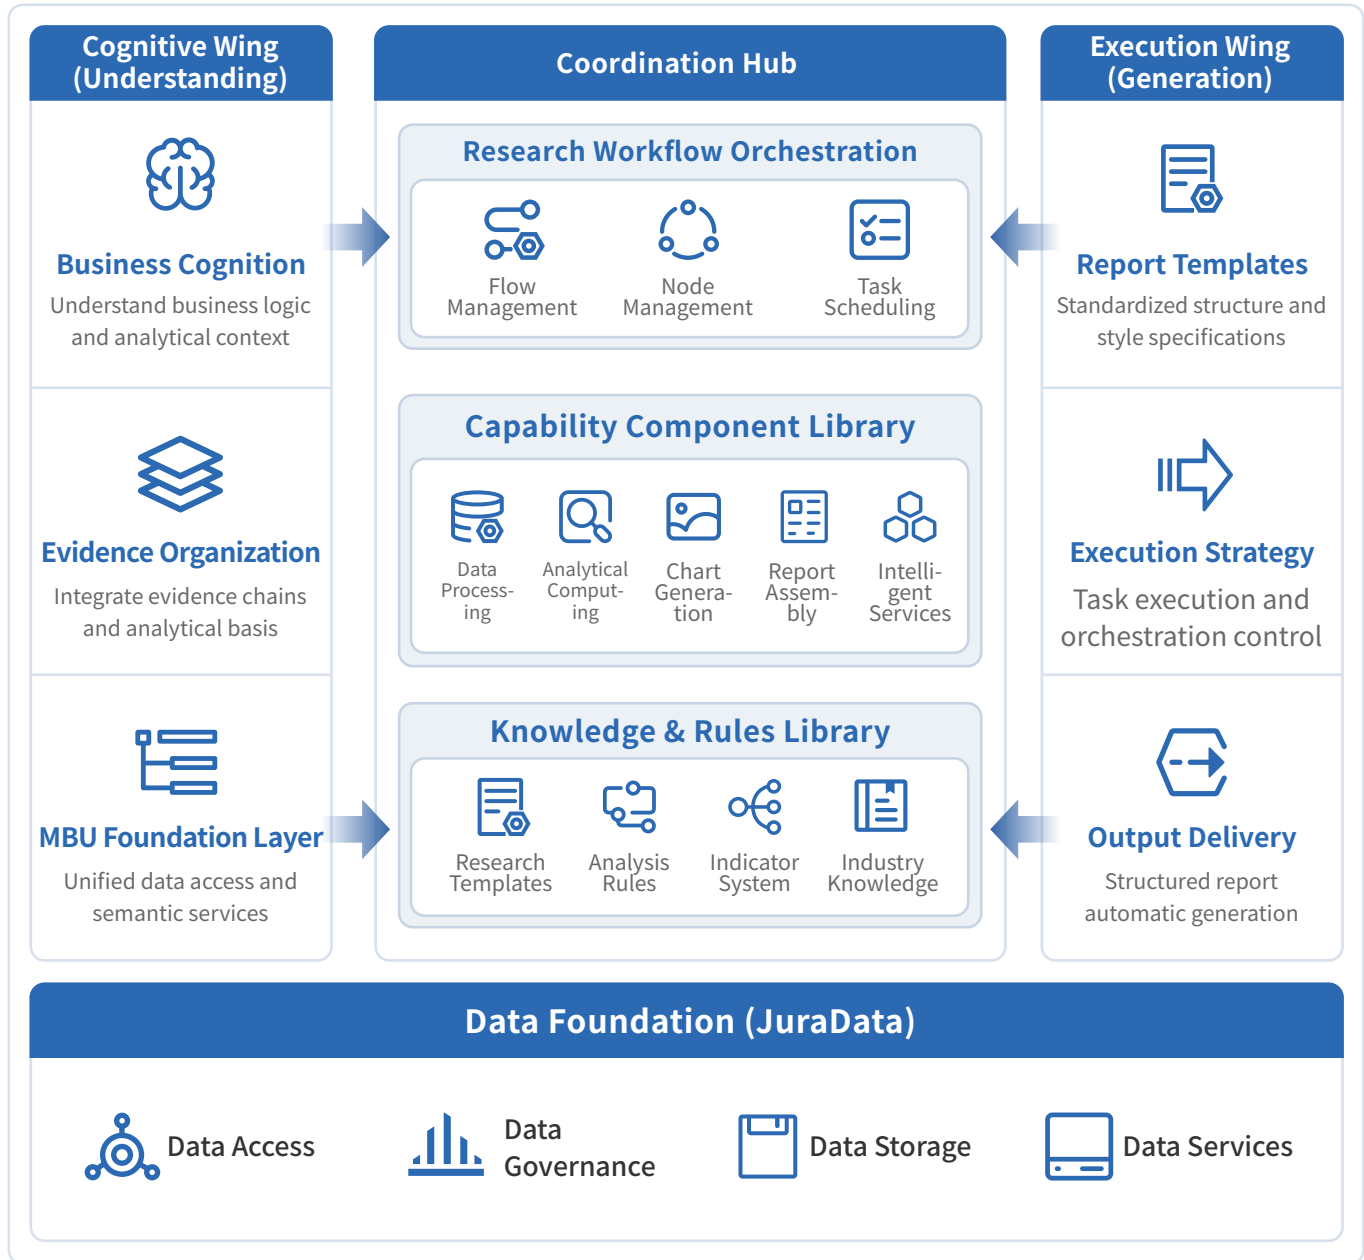

Knowledge Retention

Transform expert experience into reusable research templates and analytical methods.

Make research more efficient and decision-making more intelligent

Product Architecture

Report generation is not simple text assembly. It is built on the deep collaboration of a dual-wing “Cognition + Execution” architecture.

Cognitive Wing: endowing reports with insight

Through business cognition and evidence organization, the platform draws professional data from the MBU foundation layer and transforms it into structured business logic. Powered by MBU semantic services, the system can interpret the business meaning behind raw data and convert it from raw numbers into professional conclusions.

Execution Wing: driving report delivery

By reading standardized report templates, the platform adapts to different business scenarios and automatically orchestrates capability components, filling analytical results into the appropriate sections while preserving both industry standards and data-driven analytical depth.
